

QC-SOP-011 — Review, approval and electronic signatures

Revision D0.2 | DRAFT FOR REVIEW | Revised 2026-10-04

Effective date: not recorded. Approval/signature: not recorded. This draft does not authorize testing, release, production changes or UAT acceptance.

1. Purpose and scope

Review evidence and record decisions with the correct authority, workflow order and binding signature.

Implementation: SOURCE-ALIGNED DRAFT

2. Responsibilities and review

Responsible specialists: Supervisor; QCM; Authorized domain approver; QMS

Review: Supervisor; QCM; Authorized domain approver; QMS

Approval: Authorized QMS / Document Control approver under the approved document policy; not yet established for this draft

3. Before you start

- The applicable authority and signature policy is approved.
- The reviewer can read the exact version and its raw evidence.
- Separation-of-duties and scope checks pass.

4. Procedure

1. Open the submitted record and compare its identity, version, source applicability and raw evidence. Review the scientific basis and all unresolved exceptions.
2. Return incomplete or inconsistent work with a specific reason. The author corrects through the supported RETURNED and RESUME path; a reviewer must not edit historical evidence to make approval possible.
3. For inspection and laboratory records, Supervisor begins review and records stage-1 approval. This event moves UNDER_REVIEW to PENDING_QCM_APPROVAL and has no formal stage-1 e-signature.
4. QCM reviews the exact pending version, verifies the Supervisor decision and completes reauthentication for FINAL_APPROVE. The server binds actor, meaning, target version/hash and decision to signature and audit in the controlled transaction.
5. After final approval, confirm APPROVED and the displayed signature/decision evidence. An entered name or photographed signature is not an application signature ceremony.
6. Do not apply this inspection/lab authority automatically to generic documents, change requests, CAPA or release. Each workflow has its own policy and permission requirements.
7. Generic approval and change-request decisions remain fail-closed where PD-32 is unresolved. Document approval remains POLICY_SOURCE_REQUIRED. Record the blocked decision and obtain the authority source.
8. An authorized reopen preserves prior approval and returns the record to review. Repeat the required review stages on the changed version.

5. Decisions, errors and stop conditions

- QC entry users cannot review, return, approve, sign, close, finalize, void or attest.

- If password confirmation fails, the request is stale or the signature cannot bind, no decision is accepted.

6. Records and handoff

- Review checklist and reasons
- Version-bound decision
- Signature evidence
- Audit and reopen history

Before handoff, reopen the saved record where the application supports it and compare the result with the source. Retain an unresolved outcome as unresolved; do not infer approval from a name, signature image, task completion or test result.

7. Sources and related documents

- Documents/OWNER-DECISION-RBAC-2026-09-23.md
- src/modules/laboratory/domain/lab-state.ts
- src/modules/quarantine/inspection/domain/inspection-state.ts
- Documents/DECISION-ASSUMPTION-REGISTER-026.md

Repository sources are bound to HEAD 435f9f704049dee4916223b24b96866d7fa9af2e. Resolve source IDs, file hashes, external editions and form originals in References (source metadata is inside Authoring_Sources.zip).

8. Required decisions before approval

- DEC-016 — Generic signature and document authority

Document Control records real reviewer outcomes and actual approval/effectivity only after the controlled process. Completed proposals for these decisions are provided in References/Policy_and_Method_Decision_Book.pdf. Required source evidence and owner adoption remain explicitly recorded there.

9. Current route references

- /approvals
- /approvals/[approvalId]

Route placeholders identify existing records. Route coverage is documentation mapping, not proof that every role/state was accepted in a browser. Exact extracted field and permission strings are in References/route-coverage.pdf and References/source-contract-register.pdf.

10. Detailed operating policy and review checks

These are D0.2 proposed operating controls for adoption. Official company records remain valid physical source records; this revision does not retrospectively change their outcomes. Use the operational record named below to capture execution and exceptions.

DEC-016 — Document, change and signature policy

Bind the decision to document number/revision, file digest, actor, role/scope, decision meaning, timestamp and authentication evidence. Preserve rejection/return reasons. Reopening creates a new review cycle

without erasing the signed predecessor. A changed file invalidates the pending approval binding and requires renewed review.

Decision and exception check: Proposed separation: author cannot give their own final approval; reviewers may request corrections but may not replace raw evidence; only an approved release/distribution role may make a revision effective. Maintain current application denial for generic approval while RD-019/PD-32 are unresolved. Adopt this policy through the real owner/QMS process before implementation.

Record: QC-REC-009 review, approval and effectivity record; QC-SOP-001/011/022/023.

Revision record

D0.2, 2026-10-04: expanded execution, exception and handoff controls; incorporated owner-confirmed official physical forms and completed technical decision proposals. Previous D0.1 sources are retained in History/D0.1 within Authoring_Sources.zip. Review and approval remain unrecorded.
