

QC-SOP-022 — Templates, controlled documents and revisions

Revision D0.2 | DRAFT FOR REVIEW | Revised 2026-10-04

Effective date: not recorded. Approval/signature: not recorded. This draft does not authorize testing, release, production changes or UAT acceptance.

1. Purpose and scope

Manage approved templates and document revisions with immutable execution snapshots and registered source lineage.

Implementation: SOURCE-ALIGNED DRAFT

2. Responsibilities and review

Responsible specialists: Document Control; Template technical owner; Supervisor; QCM

Review: Document Control; Template technical owner; Supervisor; QCM

Approval: Authorized QMS / Document Control approver under the approved document policy; not yet established for this draft

3. Before you start

- The source document identity, revision, content digest and applicability are available.
- Template authority follows P-06.
- Generic document authority and effectivity decisions must be approved before promotion.

4. Procedure

1. Create a document or template with its real identity and scope. Register source files through the permitted evidence workflow rather than entering an arbitrary path as authority.
2. For a scientific template, identify each point, datatype, unit, criteria, precision, rounding and calculation source. Missing scientific authority prevents official evaluation.
3. P-06 template management is limited to Supervisor, Manager or the active named yazeed through explicit permissions. Admin and a non-named SYSTEM_OWNER do not acquire that authority.
4. Edit eligible drafts using the opened version and content hash. On conflict, compare versions and reconcile; do not overwrite a newer author contribution.
5. Create a new revision from the latest EFFECTIVE predecessor through the supported revision process. Respect the single open draft and retain evidence file digests and predecessor history.
6. Submit for the applicable review. Generic document APPROVE remains fail-closed until RD-019/PD-32 authority is established; APPROVED is still distinct from EFFECTIVE.
7. Stop or supersede a template only through supported authorized actions. Old inspection/laboratory executions keep their frozen template and source context.
8. Distribute an effective revision and withdraw superseded working copies only after actual approval/effectivity and training. This pack remains D0.2 draft.

5. Decisions, errors and stop conditions

- A stale content hash or missing registered file blocks the edit or transition.

- A source file ACTIVE status does not by itself prove approved scientific effectivity.

6. Records and handoff

- Document/version record
- Registered source digest
- Template point definitions
- Revision/CAS history
- Review and distribution evidence

Before handoff, reopen the saved record where the application supports it and compare the result with the source. Retain an unresolved outcome as unresolved; do not infer approval from a name, signature image, task completion or test result.

7. Sources and related documents

- src/modules/documents/domain/document-state.ts
- src/modules/quarantine/templates/domain/template-state.ts
- Documents/DECISION-ASSUMPTION-REGISTER-026.md

Related work instructions: QC-WI-035, QC-WI-036, QC-WI-037, QC-WI-066

Repository sources are bound to HEAD 435f9f704049dee4916223b24b96866d7fa9af2e. Resolve source IDs, file hashes, external editions and form originals in References (source metadata is inside Authoring_Sources.zip).

8. Required decisions before approval

- DEC-001 — Scientific source and applicability
- DEC-005 — Per-point and overall evaluation
- DEC-016 — Generic signature and document authority
- DEC-020 — Retention, file safety and record storage

Document Control records real reviewer outcomes and actual approval/effectivity only after the controlled process. Completed proposals for these decisions are provided in References/Policy_and_Method_Decision_Book.pdf. Required source evidence and owner adoption remain explicitly recorded there.

9. Current route references

- /quarantine/admin
- /documents
- /documents/new
- /documents/[documentId]
- /documents/[documentId]/versions/new
- /documents/[documentId]/versions/[versionId]
- /documents/[documentId]/versions/[versionId]/review
- /quarantine/admin/[templateId]

- /documents/[documentId]/versions/[versionId]/edit

Route placeholders identify existing records. Route coverage is documentation mapping, not proof that every role/state was accepted in a browser. Exact extracted field and permission strings are in References/route-coverage.pdf and References/source-contract-register.pdf.

10. Detailed operating policy and review checks

These are D0.2 proposed operating controls for adoption. Official company records remain valid physical source records; this revision does not retrospectively change their outcomes. Use the operational record named below to capture execution and exceptions.

DEC-001 — Source adoption and applicability

The technical owner prepares a product matrix by item code, size, material, connector, sterile/bulk condition and intended use. For each row, identify the current company WI, product specification and external standard where applicable. Document Control compares the controlled master with the photographed copy. A newer standard edition triggers an impact review; it does not silently replace the company method.

Decision and exception check: An applicable source package passes review when the exact revision can be retrieved, every mandatory point has a source and method, and the reviewer has resolved conflicting instructions. Preserve existing physical record outcomes as recorded. Registering them digitally does not create a new approval or retrospective release.

Record: QC-REC-001 source adoption record; company form register; clause-to-point matrix.

DEC-005 — Point evaluation and overall result

For a valid numeric run, retain the unrounded observation and compare by the exact approved operator. For visual checks, record a concrete observation and the form legend. The physical legend distinguishes acceptable, not acceptable, read remarks and not applicable. Preserve R as a review requirement and NA with a point-specific reason; neither becomes a automatic PASS.

Decision and exception check: Proposed aggregation: all required applicable points must have valid accepted outcomes before an overall pass is proposed. Any failed required point prevents a pass; missing/invalid/conflicted evidence remains HOLD/further evaluation. A reviewer resolves contradictory remarks even when an Accepted box is ticked. Lot release is a separate disposition.

Record: QC-REC-005 acceptance-point specification and review; original per-point result and remarks.

DEC-016 — Document, change and signature policy

Bind the decision to document number/revision, file digest, actor, role/scope, decision meaning, timestamp and authentication evidence. Preserve rejection/return reasons. Reopening creates a new review cycle without erasing the signed predecessor. A changed file invalidates the pending approval binding and requires renewed review.

Decision and exception check: Proposed separation: author cannot give their own final approval; reviewers may request corrections but may not replace raw evidence; only an approved release/distribution role may make a revision effective. Maintain current application denial for generic approval while RD-019/PD-32 are unresolved. Adopt this policy through the real owner/QMS process before implementation.

Record: QC-REC-009 review, approval and effectivity record; QC-SOP-001/011/022/023.

DEC-020 — Retention and controlled storage

For each class, QMS and the record owner set the legal/contractual basis, retention trigger, approved period, archive location, access roles, retrieval target and disposal authority. A legal hold suspends disposal. On receipt, verify type, readability, complete pages and malware-scan outcome under approved tooling; isolate

suspicious files. A content hash checks integrity, not safety or approval.

Decision and exception check: Perform a retrieval check by locating a selected record, opening all attachments and confirming identity/hash and related signatures. Disposal requires hold review, eligibility evidence, authorized approval and a destruction log. If no retention period is approved, retain the record pending disposition rather than inventing an expiry.

Record: QC-REC-013 retention, retrieval and disposition schedule; QC-SOP-010/024.

Revision record

D0.2, 2026-10-04: expanded execution, exception and handoff controls; incorporated owner-confirmed official physical forms and completed technical decision proposals. Previous D0.1 sources are retained in History/D0.1 within Authoring_Sources.zip. Review and approval remain unrecorded.
