

QC-SOP-027 — AI advisory governance

Revision D0.2 | DRAFT FOR REVIEW | Revised 2026-10-04

Effective date: not recorded. Approval/signature: not recorded. This draft does not authorize testing, release, production changes or UAT acceptance.

1. Purpose and scope

Use AI only as non-binding advice within approved provider, data and consent boundaries.

Implementation: SOURCE-ALIGNED DRAFT

2. Responsibilities and review

Responsible specialists: Named owner; QMS; Authorized advisory user; Privacy/security reviewer

Review: Named owner; QMS; Authorized advisory user; Privacy/security reviewer

Approval: Authorized QMS / Document Control approver under the approved document policy; not yet established for this draft

3. Before you start

- The owner has approved provider, model, data classes, geography and retention.
- The configuration is valid and enabled under that policy.
- The user gives explicit consent for the particular external request.

4. Procedure

1. Confirm the policy and provider status before opening an external request. Default-disabled or POLICY_SOURCE_REQUIRED states must remain closed.
2. Identify the question and minimize its data. Do not send this pack's real company form images, signatures, personal details or QC evidence to an external AI provider without explicit applicable approval.
3. Review the exact data that will be transmitted and obtain per-request consent. Consent to one question does not cover later requests.
4. Submit using the approved provider boundary. Preserve sanitized request/correlation evidence without recording credentials or unnecessary sensitive prompt data.
5. Treat the response as advisory. Verify factual and scientific claims against controlled sources before using them in an operational decision.
6. AI cannot write controlled business records, establish test PASS, release material, sign approval or close quality work. Use the normal authorized process for those actions.
7. On timeout, refusal or unknown transport outcome, retain the draft locally as permitted and investigate request status before retrying. Renew consent when the request data changes.
8. Review provider recovery, privacy and audit evidence through the approved policy process. A successful demo response does not approve a provider or data class.

5. Decisions, errors and stop conditions

- Absent policy, credentials, configuration or consent prevents sending.
- An AI suggestion never replaces a method owner, controlled source or signer.

6. Records and handoff

- Approved provider policy
- Request-specific consent
- Sanitized request outcome
- Human source verification

Before handoff, reopen the saved record where the application supports it and compare the result with the source. Retain an unresolved outcome as unresolved; do not infer approval from a name, signature image, task completion or test result.

7. Sources and related documents

- Documents/AI-PROVIDERS.md
- src/modules/ai-advisory
- Documents/DECISION-ASSUMPTION-REGISTER-026.md

Related work instructions: QC-WI-045

Repository sources are bound to HEAD 435f9f704049dee4916223b24b96866d7fa9af2e. Resolve source IDs, file hashes, external editions and form originals in References (source metadata is inside Authoring_Sources.zip).

8. Required decisions before approval

- DEC-023 — AI provider/data governance

Document Control records real reviewer outcomes and actual approval/effectivity only after the controlled process. Completed proposals for these decisions are provided in References/Policy_and_Method_Decision_Book.pdf. Required source evidence and owner adoption remain explicitly recorded there.

9. Current route references

- /ai-advisory

Route placeholders identify existing records. Route coverage is documentation mapping, not proof that every role/state was accepted in a browser. Exact extracted field and permission strings are in References/route-coverage.pdf and References/source-contract-register.pdf.

10. Detailed operating policy and review checks

These are D0.2 proposed operating controls for adoption. Official company records remain valid physical source records; this revision does not retrospectively change their outcomes. Use the operational record named below to capture execution and exceptions.

DEC-023 — AI advisory data handling

The owner and privacy/security reviewer document provider/model, geography, retention/training terms, permitted data classes, credentials custody, incident path and audit metadata. Minimize each prompt; remove personal identifiers and signatures. Actual company photos may contain names, supplier information and production details; their presence in this repository is not consent to external upload.

Decision and exception check: Each authorized request records purpose, policy version, allowed content class, consent and response correlation. Verify recommendations against the controlled sources and record the human conclusion. Deny when the policy/provider is missing, consent is absent or the data exceeds

scope. Record provider failure without substituting fabricated advice.

Record: QC-REC-016 AI request assessment; QC-SOP-027; current AI-PROVIDERS source.

Revision record

D0.2, 2026-10-04: expanded execution, exception and handoff controls; incorporated owner-confirmed official physical forms and completed technical decision proposals. Previous D0.1 sources are retained in History/D0.1 within Authoring_Sources.zip. Review and approval remain unrecorded.
